

The Future Classroom Lab (FCLab.fi) develops innovative learning environments, teaching technology and pedagogy in their units across Finland. The network promotes the digitalization of educational institutions and develops the modern ways of working in the schools.

Finland's FCLabs are located in university training schools. There are ten units in the network geographically covering almost the entire country. FCLab works in close cooperation with other national and international networks and is constantly looking for partners to do development work with.

The Finnish project is part of the international Future Classroom Lab concept, which focuses on the development of learning environments and the continuing education needs of teachers. It is an integral part of the international FCL Network of Learning Labs network of demo facilities. Future Classroom Lab activities are coordinated internationally by European Schoolnet, and it receives funding for its activities from the European Ministries of Education.
